

JENSON USA

MILESTONE PROJECT

Presented by : Aniket Patro

JENSON USA

- Jenson USA is one of America's leading retailers specializing in bicycles, cycling components, accessories, and outdoor gear. Founded with a strong passion for cycling, the company is committed to providing high-quality products, expert guidance, and a smooth online shopping experience. Jenson USA offers a wide selection of trusted premium brands along with fast and reliable shipping services. Through a customer-focused and data-driven approach, the company continuously improves its product range and service quality. Today, Jenson USA is a trusted destination for both beginner riders and professional cyclists in the competitive outdoor sports market.

01.Find the total number of products sold by each store along with the store name.

```
SELECT
    stores.store_name,
    SUM(order_items.quantity) AS total_product_sold
FROM
    order_items
    JOIN
    orders USING (order_id)
    JOIN
    stores USING (store_id)
GROUP BY stores.store_name
ORDER BY total_product_sold DESC;
```

02. Calculate the cumulative sum of quantities sold for each product over time.

```
select products.product_name,orders.order_date,order_items.quantity,  
sum(order_items.quantity)  
over(partition by products.product_name order by orders.order_date,orders.order_id) as cumulative_quantity  
from products  
join order_items using(product_id)  
join orders using(order_id)  
order by products.product_name,orders.order_date,order_items.quantity;
```

03. Find the product with the highest total sales (quantity * price) for each category.

```
with product_sales as (select categories.category_name,products.product_name,  
sum(order_items.quantity*order_items.list_price) as total_sales,  
rank() over(partition by categories.category_name order by sum(order_items.quantity*order_items.list_price) desc) as sales_rnk  
from order_items  
join products using(product_id)  
join categories using(category_id)  
group by categories.category_name,products.product_name)  
select category_name,product_name,total_sales  
from product_sales  
where sales_rnk=1;
```

04.Find the customer who spent the most money on orders.

```
SELECT
    customers.customer_id,
    customers.first_name,
    customers.last_name,
    SUM(order_items.quantity * order_items.list_price) AS total_spent
FROM
    order_items
    JOIN
    orders USING (order_id)
    JOIN
    customers USING (customer_id)
GROUP BY customers.customer_id , customers.first_name , customers.last_name
ORDER BY total_spent DESC
LIMIT 1;
```

05. Find the highest-priced product for each category name.

```
SELECT
    categories.category_name, p1.product_name, p1.list_price
FROM
    products p1
    JOIN
    categories USING (category_id)
WHERE
    p1.list_price = (SELECT
        MAX(p2.list_price)
        FROM
            products p2
        WHERE
            p2.category_id = p1.category_id)
ORDER BY categories.category_name;
```

06.Find the total number of orders placed by each customer per store.

```
SELECT
    orders.customer_id,
    orders.store_id,
    COUNT(orders.order_id) AS total_orders
FROM
    orders
GROUP BY orders.customer_id , orders.store_id
ORDER BY total_orders DESC;
```

07. Find the names of staff members who have not made any sales.

```
SELECT
    staffs.staff_id,
    CONCAT(staffs.first_name, ' ', staffs.last_name) AS staff_name
FROM
    staffs
WHERE
    NOT EXISTS( SELECT
        1
        FROM
            orders
        WHERE
            orders.staff_id = staffs.staff_id);
```

08.Find the top 3 most sold products in terms of quantity.

```
SELECT
    products.product_id,
    products.product_name,
    SUM(order_items.quantity) AS total_quantity_sold
FROM
    order_items
    JOIN
    products USING (product_id)
GROUP BY products.product_id , products.product_name
ORDER BY SUM(order_items.quantity) DESC
LIMIT 3;
```

09. Find the median value of the price list.

```
select avg(list_price) as median_price
from (select list_price ,row_number() over (order by list_price ) as rn,
count(*) over() as cnt
from products) as t
where rn in (floor((cnt+1)/2),ceil((cnt+1)/2));
```

10. List all products that have never been ordered.(use Exists)

```
SELECT
    products.product_id, products.product_name
FROM
    products
WHERE
    NOT EXISTS( SELECT
                  1
                FROM
                    order_items
                WHERE
                    order_items.product_id = products.product_id);
```

11. List the names of staff members who have made more sales than the average number of sales by all staff members.

```
with m as (select concat(staffs.first_name," ",staffs.last_name) as staff_full_name,  
count(orders.order_id) as order_count  
from staffs  
left join orders using(staff_id)  
group by concat(staffs.first_name," ",staffs.last_name))  
select staff_full_name from m where order_count > (select avg (order_count) from m);|
```

12. Identify the customers who have ordered all types of products (i.e., from every category).

```
SELECT
    orders.customer_id
FROM
    orders
    JOIN
    order_items USING (order_id)
    JOIN
    products USING (product_id)
GROUP BY orders.customer_id
HAVING COUNT(DISTINCT products.category_id) = (SELECT
    COUNT(*)
FROM
    categories);
```

KEY INSIGHTS

- Inventory Gaps: We have a list of products that have never been ordered. This helps us decide what to discontinue or promote more heavily.
- Customer Insights: The analysis pinpointed the single customer who spent the most, allowing us to create targeted loyalty programs.
- Pricing Strategy: Assesses highest-priced products and median price points.
- Customer Loyalty: Analyzes order frequency per store.
- Staff Performance: Identifies top performers and those needing improvement.
- Future initiatives: Collaborative partnerships. Foster collaborations with tech innovators and industry leaders to drive innovation.
- Product enhancement. Introduce regular updates and features to enhance product offerings.
